

Appln. No. 09/439,332  
Amendment dated August 30, 2004  
Reply to Office Action mailed May 28, 2004

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims (deleted text being struck through and added text being underlined):

1           1. (Previously Presented) A machine for cutting and feeding sheet  
2 material comprising:  
3           a frame, said frame being generally rectangular;  
4           a paper cutting and delivering means comprising:  
5           a material feeding roller means mounted to said frame, said feeding  
6           roller means for holding a roll of paper;  
7           a drawing means, and a motor means for rotating said drawing means,  
8           wherein said drawing means is for drawing said paper from said  
9           paper roll;  
10          a cutting means, said cutting means being mounted adjacent to said  
11          draw roller, said cutting means comprising a latitudinal  
12          perforating bar for perforating said paper along a width of said  
13          paper, and a latitudinal cutting bar for cutting said paper along  
14          said width of said paper;  
15          a guide roller assembly comprised of four rollers and two guides  
16          orientated to feed said paper from said cutting means to an exit  
17          in said frame; and  
18          an actuating means operationally coupled to said cutting means and to  
19          said motor means;  
20 wherein said frame has an inside portion and an outside portion whereby  
21          said material feeding roller means is mounted to said frame on said  
22          outside of said frame;  
23 wherein said drawing means further comprises:  
24          a first pair of rollers, a tension roller and a second pair of rollers,  
25          said tension roller having a spring attached thereto for applying  
26          downward tension on said tension roller wherein said second pair

Appln. No. 09/439,332  
Amendment dated August 30, 2004

27 of rollers being rotated by said motor means.

2. (Canceled)

3. (Canceled)

1 4. (Previously Presented) The machine for cutting and feeding sheet  
2 material as stated in claim 1, wherein said paper cutting and delivery means  
3 further comprises a sensor coupled to said frame, wherein said sensor  
4 measures a length of said paper, said sensor being between said motor  
5 means and said second pair of roller wherein said sensor is for actuating  
6 said motor means for rotating said second pair of rollers.

1 5. (Previously Presented) The machine for cutting and feeding sheet  
2 material as stated in claim 1, wherein said cutting means further comprises a  
3 longitudinal perforating wheel, wherein said perforating wheel perforates  
4 said paper along a length of said paper.

1 6. (Previously Presented) The machine for cutting and feeding sheet  
2 material as stated in claim 1, wherein said paper cutting and delivery means  
3 further comprises:  
4 a paper holder being mounted in said frame, said paper holder  
5 being located between said cutting means and said guide roller  
6 assembly;  
7 a second guide roller assembly mounted between said cutting  
8 means and said paper holder, said second guide roller assembly  
9 comprising two rollers and two guide bars for directing said paper into  
10 said paper holder.

Appln. No. 09/439,332  
Amendment dated August 30, 2004

1           7. (Previously Presented) The machine for cutting and feeding sheet  
2 material as stated in claim 1, wherein said frame further contains a second  
3 and a third paper cutting and delivery means being substantially identical as  
4 said first paper cutting and delivery means, said second means being  
5 mounted below said first means, said third means being mounted below said  
6 second means whereby all three cutting and delivery means are mounted  
7 parallel to each other and all direct paper from a first end of said frame to a  
8 second end of said frame.

1           8. (Previously Presented) The machine for cutting and feeding sheet  
2 material as stated in claim 7, wherein said first paper cutting and delivery  
3 means is adapted to hold paper of a different width than said second and  
4 third paper cutting and delivering means, said second paper cutting and  
5 delivery means being adapted to hold paper of a different width than said  
6 third paper cutting and feeding means.

1           9. (Previously Presented) The machine for cutting and feeding sheet  
2 material as stated in claim 1, wherein said actuating means is adapted to be  
3 programmable for variable cutting and perforating patterns.

1           10. (Previously Presented) The machine for cutting and feeding sheet  
2 material as stated in claim 6 wherein said paper holder is slidably mounting  
3 into said frame wherein said paper holders can be accessed by pulling said  
4 paper holders from said frame.

1           11. (Previously Presented) A machine for cutting and feeding sheet  
2 material comprising:  
3               a frame, said frame being generally rectangular wherein said  
4 frame has an inside portion and an outside portion;  
5               a paper cutting and delivering means comprising:  
6               a material feeding roller means wherein said roller means is attached

Appln. No. 09/439,332  
Amendment dated August 30, 2004

7 to the outside portion of said frame, said feeding roller means  
8 being for feeding a continuous roll of paper into said frame such  
9 that said paper is horizontal to a floor;  
10 a drawing means mounted to said inside of said frame wherein said  
11 drawing means flattens said paper, said drawing means being  
12 adjacent to said feeding means, said drawing means being  
13 comprised of a first draw roller assembly, a tension roller and a  
14 second draw roller assembly, said tension roller having a spring  
15 attached thereto for applying downward tension on said tension  
16 roller, said first and said second draw roller assemblies being  
17 comprised of two rollers, said second draw roller being in fluid  
18 connection with a sensor whereby said sensor rotates said second  
19 draw roller to pull said paper into said frame wherein said  
20 sensor measures a length of said paper;  
21 a motor means rotationally coupled to said sensor means, motor means  
22 for rotating said sensor means;  
23 a cutting means, said cutting means being mounted adjacent to said  
24 second draw roller, said cutting means comprising a longitudinal  
25 perforating wheel, a latitudinal perforating bar, and a latitudinal  
26 cutting bar, said perforating wheel perforates said paper along a  
27 length of said paper, said latitudinal perforating bar perforates  
28 said paper along a width of said paper, said latitudinal cutting  
29 bar cuts said paper along said width of said paper;  
30 a paper holder mounted in said frame;  
31 a first guide roller assembly mounted between said cutting means and  
32 said paper holder, said first guide roller assembly comprising  
33 two rollers and two guide bars for directing said paper into said  
34 paper holder;  
35 a second guide roller assembly comprised of four rollers and guides  
36 for feeding said paper from said paper holder to an exit in said  
37 frame;

Appln. No. 09/439,332  
Amendment dated August 30, 2004  
Reply to Office Action mailed May 28, 2004

38        said exit in said frame comprising two rollers and an opening in said  
39        frame; and  
40        an actuating means operationally coupled to said cutting means and to  
41        said motor means, said actuating means being programmable for  
42        variable cutting and perforating patterns.

12. through 22. (Canceled)
